Index

Volume 6 1979–1980

Abstracts, 61, 135, 205, 271
Adams K.: *see* Johnson G.
Adendorff D.: *see* Davies M. R. Q.
Aetiology of burn injury, serum enzymes as guide to, 42
Anaemia of burns, 1
Anaesthesia, advantages of physiotherapy for burn patients under, 202
Antibiotics, topically applied, influence of, on local bacterial flora in thermal injuries, 37
Apesos J., Dawson B. K. and Law E. J.: Comparative statistical methods in analysis of burn victims, 181
Ashur H., Ben-Hur N., Kuperman O. and Eshar Y.: Liver dysfunction and immunological disturbances in thermal burn injury, 160
Autografts and homografts in severe burns, intermingled transplantation of, 141

Baar S.: Anaemia of burns, 1
Baar S.: Functional significance of red cell deformability and its significance in burns, 85
Bacterial flora, local, in thermal injuries, influence of topically applied antibiotics on, 37
  motility: component in experimental *Pseudomonas aeruginosa* burn wound sepsis, 235
Bacteriological study, *in vitro*, on film burn wound coverings, 96
Banana leaves, sterile steamed, use of, in local treatment of burns, 264
Batstone G. F.: *see* Coombes E. J.
Baxter C. R.: *see* Sato R. M.
Ben-Hur N.: *see* Ashur H.
Biological coverage on burn patients, use of staples in achieving, 261
Blood glucose level as aid in diagnosis of septicaemia, 111
  vessels, permeability of, after thermal injury, 213
Bolieu S. L.: *see* Knudson M. S.
Bond T. P.: *see* Nozaki M.
Bootman J. L., Wertheimer A. I. and Zaske D.: Using discriminant function analysis to estimate impact of therapeutic intervention in burn care, 149
Borderon E.: *see* Greco J. M.
Bowen-Jones E.: Controlled trial comparing human plasma protein fraction with freeze-dried plasma for resuscitation during the burn shock period, 124
Bridges K., Cason J. S., Jackson D. M., Kidson A., Lowbury E. J. L. and Wilkins M. D.: Topical chemoprophylaxis with cerium nitrate cream, 231
Brown R. D.: *see* Knudson M. S.
Burge P. D. and Gilbert S. J.: Effect of histamine H_2-receptor antagonist on swelling of burned hand, 30

Calciuretic response to protein loading in burn patients, 198
Candida infection of burns, 228
Cardiac infection in acute burn patients, 48
Carlson J. R.: *see* Mancusi-Ungaro H. R.
Cason J. S.: *see* Bridges K.
Cell deformability, red, functional significance of, and significance in burns, 85
Cerium nitrate cream, topical chemoprophylaxis with, 231
Chao Yen-Fei: *see* Yang Chih-Chun
Children, burn prevention programmes for: are they effective?, 73
  sleepwear flammability standards: have they worked?, 255
Chongchet V.: Use of sterile steamed banana leaves in local treatment of burns, 264
Chu Te-An: *see* Yan Chih-Chun
Colouring damaged tissues on burn wound surface, 156
Coombes E. J., Batstone G. F., Levick P. L. and Shakespeare P. G.: Serum enzymes: guide to aetiology of burn injury, 42
Coombes E. J.: *see also* Matthews S. C. W.
Corynebacterium parvum in experimental burn disease of mice, therapeutic effect of, 45
Crawford J. D.: *see* McLoughlin E.
Cytochrome P-450 levels in hepatic microsomes after burn injuries, changes in, 174

Davis M. R. Q., Adendorff D., Rode H. and van der Riet R. le S.: Colouring damaged tissues on burn wound surface, 156
Dawson B. K.: *see* Apesos J.
Débridement agent, Travase, enzymatic activitiy of, towards variety of protein substrates, 15
Debrisan (dextranomer), controlled trial of, in burns of hand, 12
Deformability of red cell, functional significance of, and significance in burns, 85
De Gennaro M.: *see* Seccia A.
Dextranomer (Debrisan), controlled trial of, in burns of hand, 12
Dhennin C.: *see* Greco J. M.
Discriminant function analysis to estimate impact of therapeutic intervention in burn care, 149

Edgerton M. T.: *see* Rodeheaver G. T.

Edlich R. F.: *see* Rodeheaver G. T.
Education intervention, burn: controlled study, 26
Elson C.: *see* November-Dusansky A.
Ely D. W.: *see* Matthews S. C. W.
Endocrine parameters, temporal comparison of, with post-burn rebound hyperopsonaemia, 114
Epidermal proliferation, influence of burned patients' sera on, 240
Erythrocyte filerability in burned patient, 9
Eshar Y.: *see* Ashur H.
Experimental burn disease of mice, therapeutic effect of *Corynebacterium parvum*, 45

Fisher J. C.: *see* Ninnemann J. L.
Flamini G.: *see* Seccia A.
Flammability standards for children's sleepwear: have they worked?, 255

Gilbert S. J.: *see* Burge P. D.
Gluconeogenesis and sensitivity to insulin after burns, role of hypothermia in, 222
Glucose level, blood, as aid in diagnosis of septicaemia, 111
Greco J. M., Dhennin C., Pinon G., Louhergue J. and Borderon E.: Local bacterial flora in thermal injuries: influence of topically applied antibiotics, 37
Guest M. M.: *see* Nozaki M.
Gundu Rao P.: *see* Karuna Sagar I.

Haemolytic reaction, unusual, following plasma transfusion, 9
Halne H.: *see* Kirov A.
Hand, burns of, controlled trial of dextranomer (Debrisan) in, 12
Hauben D.: *see* Mahler D.
Haury B.: *see* Rodeheaver G. T.
Healer C.: *see* McLouglin E.
Heggers J. P.: *see* Kucan J. O.
Hepatic microsomes after burn injuries, changes in cytochrome P-450 levels in, 174
Hinson T.: *see* Johnson G.
Histamine H_2-receptor antagonist, effect of, on swelling of burned hand, 30
Homografts and autografts in severe burns, intermingled transplantation of, 141
Hothem A. L.: *see* Johnson G.
Howcroft A. J.: Controlled trial of dextranomer (Debrisan) in burns of hand, 12
Hsu Wei-Shia: *see* Yang Chih-Chun
Human plasma protein fraction, controlled trial comparing, with freeze-dried plasma for resuscitation during burn shock period, 124
Hunt J. L.: *see* Sato R. M.
Hyperosonaemia, post-burn rebound, temporal comparison of, with endocrine parameters, 114
Hypertrophic scars resulting from burns, pressure treatment of, 244
Hypnosis in treatment of burns, 253
Hypothermia, role of, in gluconeogenesis and sensitivity to insulin after burns, 222

Immunological disturbances and liver dysfunction in thermal burn injury, 160
Infection(s) in burns, pseudomonas, topical therapy of, effectiveness of zinc sulphadiazine, zinc sulphate and silver sulphadiazine in, 131
  candida, of burns, 228
  cardiac, in acute burn patients 48
  control, where should we place our money for: ventilation, isolators or skin suits?, 80
  viral, in group of burned patients, 55
Insulin, sensitivity to, and gluconeogenesis after burns, role of hypothermia in, 222
Isolators, ventilation or skin suits: where should we place our money for infection control?, 80
